

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method, comprising:
receiving an order for audio or video data ~~[[via]]~~ based on a user selection from a
made while viewing a video-broadcast through a video viewing system;
wherein the step of receiving the order comprises recording a time and channel
being viewed by the user,
transmitting the order from the video viewing system to a ~~server and~~ data storage
device, matching the recorded time and channel to identify the desired audio
or video data; and
transmitting the requested audio or video data to the user ~~in a portable electronic~~
~~form~~.
2. (Withdrawn) The method of claim 1, wherein the order for data is stored by the
video viewing system for transmission to a head-end by noting a time and channel
viewed when signaled by the user.
3. (Original) The method of claim 2, wherein a user identification number is
recorded along with the time and channel viewed.

4. (Original) The method of claim 2, wherein an encrypted credit or debit card number is recorded along with the time and channel viewed.
5. (Original) The method of claim 1, wherein the order for data is appended to a communication between the video viewing system and a server regulating the broadcast received via a communications medium.
6. (Original) The method of claim 1, further including:
receiving from the user preprogrammed instructions detailing a method of transmission.
7. (Original) The method of claim 3, wherein the user identification number determines a method of transmission.
8. (Currently Amended) A system comprising:
a video viewing system for displaying video programs and receiving orders for audio or video data ~~from a viewer~~ offered in a broadcast;
wherein the system for receiving orders includes a means for recording a time and channel being viewed by the user when ordering,
~~a broadcast system over which to send the video programs;~~

a server for receiving and processing orders for audio or video data and means for matching the recorded time and channel to identify the desired audio or video data,

a communications medium between the video viewing system and the server; and

a link between the server and the viewer for delivery of the audio or video data in a portable electronic form.

9. (Currently Amended) The system of claim 8, wherein the system comprises:
a set-top box; and
a video viewing media.
10. (Original) The system of claim 8, wherein the video viewing system includes a cursor control which allows a user to signal selection by placing the cursor in a specific area, or "hot" area, of the viewing medium's screen.
11. (Original) The system of claim 8, wherein the video viewing system includes a remote control with an "activate" button, which signals selection of an audio or video data program.

12. (Original) The system of claim 8, wherein the order for data is appended to the normal regular communications between the video viewing system and a server regulating the broadcast received via a communications medium.
13. (Original) The system of claim 8, wherein more than one server and mass data storage unit service the video viewing system.
14. (Original) The system of claim 8, wherein the requested data is transmitted via a broadcast system to the user's video viewing system.
15. (Original) The system of claim 14, wherein the video viewing system includes an audio or video file player that can download the audio or video data from a port.
16. (Original) The system of claim 14, wherein the video viewing system includes a removable memory media that stores the audio or video data.
17. (Currently Amended) A machine-readable storage medium tangibly embodying a sequence of instructions executable by the machine to perform a method comprising:
receiving an order for audio or video data offered in a video broadcast [[via]]
based on a user selection ~~from a~~ made while viewing a video broadcast
through a video viewing system;

wherein the step of receiving the order comprises recording a time and channel
being viewed by the user,
transmitting the order from the video viewing system to a server and data storage
device,
matching the recorded time and channel to identify the desired audio or video
data; and
transmitting the requested audio or video data to the user in a portable electronic
form.

18. (Withdrawn) The machine-readable storage medium of claim 17, wherein the order for data is stored by the video viewing system for transmission to a head-end by noting the time and channel viewed when signaled by the user.
19. (Original) The machine-readable storage medium of claim 18, wherein a user identification number is recorded along with a time and channel viewed.
20. (Original) The machine-readable storage medium of claim 17, wherein the order for data is appended to the normal regular communications between the video viewing system and a server regulating the broadcast received via a communications medium.

Appl. No. 09/733,824
Amdt. Dated February 25, 2005
Reply to Office Action of August 25, 2004

21. (Original) The machine-readable storage medium of claim 17, wherein the user preprograms into the video viewing system a method of transmission.

Appl. No. 09/733,824
Amdt. Dated February 25, 2005
Reply to Office Action of August 25, 2004

AMENDMENTS TO THE DRAWINGS:

The attached sheets of drawings include changes to Figs. 1, 4, and 5. These sheets replace the original sheets including Figs. 1, 4, and 5.
